

Claims

I. Claims

1. A spring tether, comprising of a vinyl coated, flexible, coiled, cable in various lengths 1, and has loops at each end 2. Each loop is attached by passing an end of the cable through the loop of a snap hook 4, bending the end back up itself, and securing it with a crimp fitting 3.
2. The tether of claim 1 allows an animal freedom and movement, to eat out of a pan on the ground, or lie down while tied, hitched, or tethered.
3. The tether of claim 1 reduces the risk of getting tangled around the legs and reduces the chance of injury.
